## INTRODUCTION

- These operating instructions and description of device functions are provided as part of the scope of supply.
- They could be modified without prior notice. The improper use, possible tampering of the instrument or parts of it and substitutions of any components not original, renders the warranty automatically void.
- □ The flow meter realizes a measure with liquids of conductivity greater than 5µS/cm in closed conduits, and is composed of a converter (described in this manual) and a sensor (refer to the specific manual).
- □ The converter could be coupled directly on the sensor (compact version) or coupled to the sensor by cable supplied with it (remote version).

# SAFETY INFORMATION

- Any use other than described in this manual affects the protection provided by the manufacturer and compromises the safety of people and the entire measuring system and is, therefore, not permitted. The manufacturer is not liable for damaged caused by improper or non-designated use.
- Transport the measuring device to the measuring point in the original packaging. Do not remove covers or caps until immediately before installation. In case of cartons packaging it is possible to place one above the other but no more than three cartons. In case of wooden packaging do not place one above the other.
- Disposal of this product or parts of it must be carried out according to the local public or private waste collection service regulations.
- The converter must only be installed, connected and maintained by qualified and authorized specialists (e.g. electrical technicians) in full compliance with the instructions in this Operating Instruction, the applicable norms, legal regulations and certificates (depending on the application).

- The specialists must have read and understood these Operating Instructions and must follow the instructions it contains the Operating Instructions provide detailed information about the converter. If you are unclear on anything in these Operating Instructions, you must call the ISOIL service department.
- □ The converter should only be installed after have verified technical data provided in these operating instructions and on the data plate.
- □ Specialists must take care during installation and use personal protective equipment as provided by any related security plan or risk assessment.
- □ Never mount or wire the converter while it is connected to the power supply and avoid any liquid contact with the instrument's internal components. To connect remove the terminals from the terminal block.
- D Before connecting the power supply check the functionality of the safety equipment.
- Repairs may only be performed if a genuine spare parts kit is available and this repair work is expressly permitted.
- For the cleaning of the device use only a damp cloth, and for the maintenance/repairs contact the service center (for details see the last page).

Before starting up the equipment please verify the following:

- Dever supply voltage must correspond to that specified on the data plate
- □ Electric connections must be completed as described
- Ground (earth) connections must be completed as specified

#### □ Verify periodically (every 3-4 months):

- □ The power supply cables integrity, wiring and other connected electrical parts
- □ The converter housing integrity
- □ The suitable tightness of the sealing elements
- □ The front panel integrity (display and keyboard)
- □ The mechanical fixing of the converter to the pipe or wall stand

### **SAFETY CONVENTION**

DANGER ELETTRIC SHOCK

PRECAUTIONS

ATTENTION

5 di 108

# **CONDITIONS DELIVERY OF THE CONVERTER**

**WARNING!** The converter is supplied with the batteries disconnected so it is necessary to remove the terminal block cover, as shown below, and connect them according to the indications given in the section POS. power supply converter pag. 19

Programming is allowed in two ways:

□ Connecting a power bank  $\geq$  0.5 Ah to the USB jack. (Programming from converter keyboard)

Connecting a computer to the USB socket using the MCP program see section POS. Access Via Mcp interface (Virtual Display) pag. 41

# **TECHNICAL CHARACTERISTICS**

#### **Electrical Characteristic**

Converter classification: class I, IP67/68 for aluminum and PA6 housing, installation category (overvoltage) II, rated pollution degree 2.

Power supply version	Power supply voltage	Power supply frequency	Min Power	Max Power
HV	100-240V~	45-66Hz	1.5 W	4 W
LLV	12-48V	//	(Sensor only)	(all loads)
Lithium Battery Primary	7,2 V	//	40 mW	200 mW
Alkaline Battery 6 Size D x 15v	9V	//	40 mW	200 mW

- $\Box$  Voltage variations must not exceed ±10% of the nominal one.
- Digital and analogue inputs and outputs are isolated up to 500V.
- □ The output 4-20mA (optional) is electrically connected to the ON/OFF outputs and the output power supply(24V ---- )
- □ Version LLV : inrush current < 20A
- □ Version HV : inrush current< 25A

#### **Environmental Use Conditions**

ALLUMINUM			NYLO	N PA6	
TEMPERATURE	Min*	Мах	TEMPERATURE	Min*	Max
°C	-20	+60	°C	-10	+50
°F	-4	+140	°F	+14	+122

If the converter is supplied in compact version, consider the most restrictive ambient temperatures between converter and sensor, otherwise refer to the respective manuals.\* For discontinuous use install a heating resistor.

 $\hfill\square$  The instrument is suitable for indoor and outdoor weather conditions

- □ Altitude: from –200m to 4000m
- Humidity range: 0-100%

#### Data Plate

The instrument label contain the following information:

- □ MODEL: Convert Model
- □ S/N: Serial Number of the converter
- □ SUPPLY: Main power supply
- □ Hz: Supply frequency (AC)
- Device: POWER: Maximum power consumption
- □ IP: Protection grade
- □ T: Operation temperature
- □ COUPLING: Serial number of sensor coupled
- □ ITEM: Free for user

### **INTERNAL LAYOUT**

#### **Internal Converter Views**

The 4 screws shown in the following figure can be removed if the battery case is disassembled first.

# POWER SUPPLY CONVERTER

MV145 can be powered in different modes

- Powered by lithium batteries in slots B1 / B2
- Dever supply from alkaline batteries slot B3
- D Power supply from the mains

Below are the positions of the terminal blocks for the different types of power supply.

#### General notes for converter power supplies

- □ The converter can have different power combinations. However, all versions are able to operate at 100% of the possibilities even with only the power coming from the USB cable, transmission included. However, note that these devices are seen by the USB controller that supplies the energy as a 500 mA class device, so not all devices are able to power these electronics correctly (for example tablets and cell phones unless they are rare).
- U With the USB connection there is no battery consumption.

## **POWER SUPPLY BATTERIES**

When the B1 and B2 batteries are connected for the first time or after a long period of inactivity of the instrument, the super-capacitors coupled to the batteries are completely discharged, therefore for a certain period of time the indications will be "B1 LOW" and "B2 LOW "Until the nominal voltage of the batteries is reached. The time required depends on many factors (temperature, passivation status of the batteries, amount of battery charge remaining). The estimated time for this transition state is less than an hour.

#### Primary lithium batteries

For primary lithium batteries, connections to slots B1, B2 (see POS. power supply converter pag. 19) are prepared as follows:

The assemblable battery packs are:

#### SLOT (B1 e B2) PRIMARY LITHIUM

The battery packs for slots, B1 and B2, can have different sizes (from one to three elements). When both batteries are installed on B1 and B2, the system alternately uses the battery with the highest voltage. As soon as a battery voltage falls below a predetermined value, the system switches to the other, both batteries are therefore used alternately. This guarantees a far greater autonomy, compared to the use of the single. When one or both batteries reach a minimum usage voltage, the low battery alarm is generated. It can be repeated for a long time, since the system passes continuously from one battery to another, allowing the weaker battery to partially regenerate the potential and return to normal operation. When a battery reaches the potential of "CUT-OFF", it is disconnected and the system uses the remaining battery. At this point the remaining autonomy becomes critical.

The maximum number of battery elements housed in the battery holder is 6.

#### **Alkaline batteries**

The alkaline batteries foreseen for the MV145 converter are 6 Size D elements. The alkaline battery pack is connected in the B3 slot of the converter (POS. power supply converter pag. 19)

PCB BOARD

Connections to B1 and B2 are not used and no other batteries must be connected to the instrument.

#### Operating notes:

- Always replace all batteries at the same time as indicated on the battery holder.
- Do not mix new and used batteries or batteries with different characteristics.
- □ To maintain valid time and date when replacing batteries, connect the unit with a USB power source capable of supplying at least 500 mA.

# **ESTIMATED CONSUMPTION OF LITHIUM BATTERIES**

The consumption of lithium batteries depends mainly on:

- Sensor diameter.
- Data logger sampling interval.
- □ Number of connections to external loggers (4-20 mA or via MODBUS).
- □ Measurement profile (CONTINUOUS, SMART1, SMART2, SMART5).

Note: for other configurations / type of batteries separate consumption cannot be estimated.

For further details concerning the sampling interval and the management of the measurement power profiles see function POS. 4.1 pag. 47

# POWER SUPPLY FROM MAIN LINE

Always ensure that the converter and the sensor are grounded (earthed) correctly. The grounding of the sensor and converter must ensure that the instrument and liquid are equipotential.

- Before connecting the power supply, verify that the mains voltage is within the limits indicated on data plate.
- For the connections use only approved conductors, with fire-proof properties, whose section varies from 0.25 mm<sup>2</sup> to 1.50 mm<sup>2</sup>, based on distance/power; additionally fix the power supply wires with a additional fastening system located close to the terminal.
- The power supply line must be equipped with an external protection for overload current (fuse or automatic line breaker).
- Provide in close proximity the converter a circuit breaker easily accessible for the operator and clearly identified; whose symbols must conform to the electrical safety and local electrical requirements.
- □ Ensure that the component complies with the requirements of the standard for electrical safety distance.
- Check chemical compatibility of materials used in the connection security systems in order to minimize electrochemical corrosion. In the aluminum housing it should avoid direct contact between the ground connection cable and the aluminum housing. It is therefore recommended to connect the safety ground cable, by placing it between the washer and the metal bracket on the related terminal or use an eyelet terminal crimped on the ground protection cable.
- The sensor, hard wired inputs and outputs are connected to the converter through terminal blocks located inside the converter.
- To locate the terminal block loosen the 4 screws on the terminal block cover. When the front cover is lifted, the terminal block is visible. The terminal block is the hard wire connection of the converter to external equipment, including the sensor.

Operation note for mains power supply

- □ To start the instrument with mains power it is necessary to connect the USB cable. Condition to be repeated every time the instrument is no longer powered by batteries and mains.
- □ The system cannot work with the battery disconnected or completely discharged, even if it is powered by an external power source (network or USB).

The following pages give informations on the terminal block numbering, and the respective connecting of the sensor cables, and inputs/outputs.

# **ELECTRICAL CONNECTION CONVERTER- SENSOR**

#### Terminal block converter

Sudden movements of the electrodes cable could introduce noise. Maximum cable length: 20m.

/4

### **INPUT CONNECTIONS**

#### Digital input connections on a base card (INP COM, INP I1, INP V+)

The digital input can be used in two ways as shown below:

- □ IN 1: input 1, positive terminal
- □ INC: common of all inputs
- □ INPWR: isolated voltage generator output for inputs power supply

#### Internal power supply

### Input on / off mode for operating inputs

The activation times of the Tmin input must be greater than 1 second (inputs subordinated to the smart measurement speed 1/2/5). For electrical connections see POS. ELECTRICAL CONNECTION CONVERTER- SENSOR pag. 25.

#### Analog input connections (Al1+, Al1-, Al2+, Al2-, Al3+, COM)

- AIN1 +, AIN1-: inputs (+) and (-) for acquisition of analogue channel 1 measurements
- AIN2 +, AIN 2-: inputs (+) and (-) for acquisition of analogue channel 2 measurements
- □ AIN PWR +: output voltage excitation of pressure sensors (+)
- □ 26 AIN COM: common terminal for pressure sensors (-), connected to the internal mass of the board

The optional analogue measurement acquisition module is able to perform potential measurements, temperatures (max 2) and pressures (max 2).

The diagrams for the connections to the sensors are shown below:

#### Pressure sensor connections:

#### Temperature sensor connections:

Since there is no cable resistance compensation, it is recommended to use PT500 or PT1000 sensors if the cable length is more than one meter. The recognition of the sensor type (PT100 / 500/1000) is automatic.

#### Connection of a pressure/temperature sensor:

Two different types of sensors can be connected, a pressure sensor and a temperature sensor.

For the temperature sensor, because there is no compensation of cable resistance, we recommend the use of PT500 or PT1000 sensors if the cable length is more than one meter. The recognition of the sensor type (PT100 / 500/1000) is automatic.

# N.B: the pressure sensor MUST BE connected to input 1 and the temperature sensor MUST BE connected to Input 2!

### **OUTPUTS CONNECTIONS**

#### Digital output connections on the basic board (OUT01, OUT02, OUT COM)

The outputs are not polarized, therefore connection schemes can be adopted to positive or to common negative, as reported by the following diagram.

- □ OUT 01 = output 1
- OUT 02 = output 2
- □ OUT COM = common outputs

#### Uscita 4-20mA

The 4-20 mA output can be passive (powered from outside) or active, only when the power supply is installed. There are 3 output terminals available, the passive output uses AO + and AO- (the minimum operating voltage is 5V). When the power supply is present, it is also possible to select the active mode by connecting the load between the AO- and AOCOM terminals. In this case, the loop should not be powered. The passive mode is always available even with the power supply installed, use the AO + and AO- terminals. When the passive mode is used and the loop is powered, the instrument exits sleep mode and remains active for 10 seconds and then returns to sleep mode. This status change can only be repeated after 1 minute. For the connections to the terminal block see also POS. ELECTRICAL CONNECTION CONVERTER- SENSOR pag. 25

- AO-: OUTPUT current to the connected device (active or passive mode).
- AO+: INPUT current from the connected device (passive mode, loop supply from external source).
- AOC: return of the OUTPUT current (active mode).

**ATTENTION:** the power supply of the loop supplies power only to the 4-20 mA output circuits and not to the whole device, which therefore remains active and consumes the batteries if it is not powered in any other way.

The 4-2mA output can have two operating modes:

PASSIVE MODE: the power is supplied by an external source. Connect the POSITIVE of the external source to the AO + terminal. Connect the LOAD to the AO- terminal..

ACTIVE MODE: the power is supplied by the card power supply (if fitted). Connect the LOAD to the AO- terminal. Connect the RETURN to the AOC terminal.

#### ACTIVE CONNECTION

#### **PASSIVE CONNECTION 1-2**

The maximum load value for the PASSIVE connection depends on the supply voltage supplied. The maximum 1000 ohms of load are guaranteed only with supply voltage> = 25V.

The manufacturer guarantees only English text available on our web site www.isoil.com

The externally supplied power supply of the loop energizes only the 4-20 mA output circuits and not the whole device. When power is applied to the 4-20 mA loop and the device is powered only by the batteries, the latter will exit the low-power mode and remain active for a certain time (about 10 seconds) to allow the reading of the current value on the loop. During this phase the battery consumption is very high. To save energy, there is a current reading time of about 10 seconds every minute. Increasing the number of readings, the minimum time elapsing between one reading and the other is automatically increased by one minute at a time, according to the diagram shown below.

The energy saving algorithm is activated only for intervals of less than or equal to one minute. For longer times it does not activate. For example, by reading the current every two minutes, energy saving is not activated.

#### Simultaneous connection to digital input / output terminals on expansion module

The outputs and optional inputs on the expansion module share the same common terminals related to the card inputs and outputs. Since the input and output circuits have different common terminals, it is theoretically possible to use the same I / O terminal at the same time to read a signal via digital input and control a device via digital output. See the following diagram to understand how it works. The power supplies in this case must be separated if the possibility of simultaneous use of input and output is to be maintained.

### Optional digital inputs / outputs connections (04,IN3, 03, IN2, GND)

The digital output OUT 4 and the digital input INPUT 2 as the digital output OUT3 and the digital input INPUT 3 share the same terminal but have different municipalities, therefore the input and output circuits can be made independently 'from each other, as shown below for the OUT 3 / INPUT 3 scheme (OUT 4 / INPUT 2 are equivalent).

O4 IN3: digital output OUT 4 / digital input INPUT 3

O3 IN2: digital output OUT 3 / digital input INPUT 2

GND: terminal connected to the protective earth (chassis) for connecting cable shields

**NOTES:** The digital outputs OUT 4 and OUT 3 use the OUTC terminal as common. The digital inputs INPUT 2 and INPUT 3 use the INC terminal as common.

- Response time to MODBUS queries when the device is in SLEEP: 50 ms max (the first telegram is still lost, the next ones are acquired).
- □ Response time to MODBUS queries when the device is ACTIVE: <20 ms.

## **MIL CONNECTOR**

For details of connections with MIL connectors, refer to the manual: MV145-255\_MIL CONNECTOR POSITION.

# NOTES ON DISPLAY, RS485 PORT AND/OR OUT 4/20 mA

### RS485 port and/or out 4/20 mA

The waiting time is defined by the **"disp time" function on the** POS. 9.2 pag. 49, It's the time needed before the instrument can again respond to the display, RS485 port and / or 4/20 mA out).

### ATTENTION! THESE OPTIONS MEAN AN HIGH ENERGY CONSUMPTION

The manufacturer guarantees only English text available on our web site www.isoil.com

35 di 108

MAN\_MV145\_IT\_EN\_IS\_R05\_1.05.XXXX

# START VISUALIZATION PAGES

Direct exposure of the converter to sunlight may damage the liquid crystal display. The display of the pages can be changed with respect to some enabled or disabled functions.

Press the button to change the display.

Press the button to change the display.

Press the button to change the display.

## ACCESS TO THE CONVERTER

#### Meaning of flags

FLAG	DESCRIPTION	FLAG	DESCRIPTION
Ø	EMPTY PIPE	Ī	MIN FLOW ALARM
	FILE UPLOAD	!⁄	MAX FLOW ALARM
	FILE DOWNLOAD		VIDEO TERMINAL CONNECTED
	BATTERY RECHARGE (FLASHING) LOW BATTERY (FIXED)	<u>_!</u>	FLOW RATE OVERFLOW
	FLOW RATE SIMULATION (FLASHING)	<u>∏1</u>	PULSE 1 OVERFLOW
<b></b>	CALIBRATION (FLASHING)	<u>∏2</u>	PULSE 2 OVERFLOW
×	GENERIC ALARM (FLASHING)	~X~	SIGNAL ERROR
	GENERAL ALARM ONLY ON PHYSICAL DISPLAY (FLASHING)	-2-	EXCITATION ERROR

## LED interpretation

#### LED 1 CPU measures

- □ Red LED: Alarm signal
- Blue LED: Communication activated
- Green LED: System working correctly

## ACCESS TO THE CONFIGURATION MENU

The configuration can be done in different ways:

- By MCP interface (Virtual display of instrument)
- By keypad's converter, with the converter is connected to an external energy source (pc or power bank)
- By keypad's converter with the function "programming" activated

#### Access Via Keypad (converter is connected to an external energy source)

## SHORT PRESSING (< 1 SECOND):

Increases the numeric figure or the parameter selected by the cursor returns to the previous subject on the menu

## LONG PRESSING (> 1 SECOND):

Decreases the numeric figure or the parameter selected by the cursor. Proceeds to the next subject on the menu.

#### SHORT PRESSING (< 1 SECOND):

Moves/positions the cursor rightward on the input field. Proceeds to the following subject of the menu. Change the display of the process data

#### LONG PRESSING (> 1 SECOND):

Moves/positions the cursor leftward on the input field. Returns to the previous subject on the menu

### SHORT PRESSING (< 1 SECOND):

Enter /leave the selected function enables the main menu for the instrument configuration Cancels the selected function under progress

#### LONG PRESSING (> 1 SECOND):

Leaves the current menu Enables the totalizer reset request (when enabled) Confirms the selected function.

#### Access Via Keypad (converter is connected to an external energy source)

ATTENTION! THIS FUNCTION LEADS TO AN HIGH ENERGY CONSUMPTION

To activate this function press the button "Enter" following sentence will be shown on the display:

#### "Programming active. Attention: high power consumption"

With this option activated it's allowed use the converter as if it is connected to an external power supply.

## Access Via Mcp interface (Virtual Display)

MCP is a Windows® software that allows to set all the converter functions and personalize the menu. The MCP program is required for the blind version of the converter. To use MCP interface consult the relevant user manual.

## FLOW RATE VISUALIZATION

This symbol appears (red color on the virtual display) only when the overall noise is over 2.5% of flow rate.

MV145 allows you to view the flow in 5 digits; this means that the maximum flow displayed on the display is equal to 99999 (regardless of the position of the decimal point). The minimum displayable value is instead limited to the number 0.0025. The unit of measurement that can be represented depends on the capacity / diameter of the sensor: the units allowed are those that, once the instrument's full-scale value is set, can be represented with a numeric field whose maximum value does not exceed 99999.

Example for DN 300:

- □ Full scale value: 3m / s
- □ Allowed units of measure (examples): I / s (216.00); m3 / h (777.60); m3 / s (0.2160) ...
- Measurement units NOT allowed (examples): I / h (777600)

#### Flow rate alert

Symbol that is activated when there is a dynamic variation of the flow measurement. It indicates that the measurement shown in the display is stabilizing.

## QUICK START MENU

The QUICK START MENU allows the user immediate access to some of the most frequently used functions; through the MCP software it is possible to customize this menu, in order to make it suitable for the specific application.

Access to all converter functions

The number of functions visible in this section is related to the functions chosen for the QS menu.

Pressing the enter button from the display pages, access to the Quick Start menu is immediate. If you press the enter button to access the Main menu directly, the Quick Start may have been disabled by the function POS. 9.9 pag. 49.

## **CONVERTER ACCESS CODE**

Access to instrument programming is regulated by six access levels. All functions are assigned to a specific access code and the functions are then grouped according to a logical criterion INSERT FUNCTION.

## Access Code Set : Menu 13 System

The codes can be set from the instrument keyboard or via the MCP interface. Depending on the access level set, the menu functions will be displayed (see POS. MENU 13 - system pag. 82. These access levels interact with the function POS. 13.10 pag. 50 which enables its use.

## Restricted Access Set : Menu 13 System

Restart access = ON: Access allowed only to functions of a specific level (POS. 13.10 pag. 50 ).

SYS	T.	EM							
L1	C ·	o d	le=	: <del>Ж</del>	<del>36</del> 36	• <b>#</b> •	æ:	H J	₽₩

Res	τ.	Υ.	210	: C	es	5		•):	1

THE VALUES THAT CAN BE SET FOR THE FUNCTION. "ACCESS RIST" ARE ON / OFF.

**Example:** If the operator has an access level code 3, after entering it, it can only modify the functions provided for an access level 3.

Access to restaurants = OFF: After entering the access code of a certain level, it allows you to modify the functions of the selected level and the functions with the lowest access level. Example: If the operator has the level 3 code, after having entered it, he will be able to modify all the functions of level 1,2,3.

\* WARNING: take careful note of the customized code, since there is no way for the user to retrieve or reset it if lost. Factory preset access codes:

- □ L1: 1000000
- □ L2: 2000000
- L3: 3000000
- □ L4: 4000000

The following example shows how to change the Full scale by Quick Start menu; the second illustrates how to change the function by the Main menu.

EXAMPLE: modifying the full scale value from 4dm<sup>3</sup>/s to 5dm<sup>3</sup>/s, from the "Quick start menu"

Press the ENTER button to access the Quick Start menu

Select this function in the list to be edited

Press the ENTER button to select the function.

Change the value

Long Push

Select the value to be changed

Confirm the new value

Main Page

# EXAMPLE: modifying the full scale value from 4dm<sup>3</sup>/s to 5dm<sup>3</sup>/s, from the "Main Menu" (quick start menu enabled)

Press the ENTER button to access theQuick Start menu

Press ENTER button to confirm value.

Press the ENTER button to access the Main Menu

Press the ENTER button to access the "Scale Menu"

Select the value to be changed

Press the ENTER button Confirm the new value

Press Esc

Press arrow keys to select the cell in which to insert the number of the access code.

## FUNCTIONS MENU

**SENSO** 

	MAIN MENU	1		
	1-Sensor 2-Units			
	3-Scales			
	SENSOR			
	9 S.model	0	1.1	Sensors model: Enter the first two characters of the serial number of the sensor
	8 Lining	UNSPEC.	1.2	Flow sensor lining material type
	10-1S.type	FULLBORE	1.3	Type of sensor: fullbore or insertion
	12 U.type	METRIC	1.4	Type of measure units for sensor parameter: metric or imperial
	13-5 Diam.	00700	1.5	Sensor's nominal/real diameter DN (0-2500)
	KA	+00.9637	1.6	Sensor coefficient KZ (zero point)
	KA-	-44904	1.7	Calibration data of sensor for negative flow
	KZ	-18852	1.8	Sensor coefficient KZ (zero point)
	KD	+00.4014	1.9	Sensor coefficient KD
	Ins.position	0	1.10	Insertion position
•	KP dynamic	OFF	1.11	KP dynamic, coefficient for insertion
۲	- Ri	10000	1.12	Sensor coefficient Ki
	Kp	10000	1.13	Sensor coefficient Kp
	KC	10000	1.14	Sensor coefficient KC
	C.Cuee.	mA025.0	1.15	Sensor excitation current
	C.Reg. PR	ms03	1.16	Current regulator proportional band
	C Rea DK	stn 005	1 17	Current regulator derivation constant
	C B time	ms03	1 18	Measure sampling frequency
	F P Detect	0.000	1 19	Enables the empty nine detection feature
		Rober 0500	1 20	Empty nine detection threshold
	S err delau	10	1.20	Signal error delay (n. sample)
	Sens verify	066	1.21	Automatic sensor verify enable
	Ki	00 +000000	1.22	
	Zono point cal	00.1000000	1.20

## **FUNCTIONS DESCRIPTION**

Here below the explanation on how the rows of menu are described:

The following picture describes where to find the name of the MCP functions in MCP-software. More info see MCP manual.

## **MENU 1 - SENSOR**

(POS. 1.1) Sensor MODeL	[S.model xxx]	AL4	[SMODL]
Enter the first two characters of the serial num	ber of the sensor as on the sensor	abel.	
(POS. 1.2) LIning MAterial Type	[Lining= Unspec.]	AL4	[LIMAT]
Flow sensor lining material type. (PFA; PU-TD	; ALON; PEEK; HR; PP; PA-11; PT	FE-HT; PTFE).	
(POS. 1.3) Sensor TYPE	[S. type= FULL BORE]	AL4	[STYPE]
Select the type of full-bore sensor or insertion. sensor table parameters.	This function appears only if the se	nsor is not present in t	he standard
(POS. 1.4) Sensor Units TYPe	[U.type= METRIC]	AL4	[SUTYP]
Select type of measure unit of sensor's parame	eter. Values metric or imperial (inch	).	
(POS. 1.5) Pipe DIaMeter Value	[Diam.= mm xxx]	AL4	[PDIMV]
Select the nominal diameter of the sensor (0-2	500). ND is written on the sensor la	ıbel.	
(POS. 1.6) CoeFFicient KA	[KA = + xx.xxx]	AL4	[CFFKA]
KA factor: calibration coefficient.			
(POS. 1.7) CoeFficient KA Negative	[KA= - xx.xxx]	AL4	[CFKAN]
KA factor: calibration coefficient for negative flo	ow. This function is showed only if a	it least 1 negative KL v	alue is set.
(POS. 1.8) CoeFFicient KZ	[KZ= +/- xxxxx]	AL4	[CFFKZ]
Sensor zero calibration factor.			
(POS. 1.9) CoeFFicient KD	[KD= +/- xxxxx]	AL4	[CFFKD]
Calibration Dynamic Factor.			
(POS. 1.10) Sensor Insertion POSition	[Ins.position= x]	AL4	[SIPOS]
Parameter that refers to the position of the inse 1.3) Sensor TYPE pag. 52 is set to "insertion".	ertion sensor. This function is active See the insertion sensor manual fo	ated when the function or more details.	POS. (POS.
(POS. 1.11) Sensor Insertion Dynamic KP	[KP dynamic = ON/OFF]	AL4	[SIDKP]
KP dynamic coefficient. This function is activat "insertion". See the insertion sensor manual fo	ed when the function POS. (POS. ′ r more details.	I.3) Sensor TYPE pag.	52 is set to
(POS. 1.12) CoeFFicient KI	[Ki= +/- xx.xxx]	AL4	[CFFKI]
This function is activated when the function PC more details.	OS. 1.3 pag. 46 is set to "insertion".	See the insertion sense	or manual for

(POS. 1.13)CoeFFicient KP[Kp= +/- xxxxx]AL4[CFFKP]This function is activated when the function POS. (POS. 1.3) Sensor TYPE pag. 52 is set to "insertion". See the<br/>insertion sensor manual for more details.Image: Comparison of the function of the

(POS. 1.14) CoeFFicient KC	[KC = +/-xx.xxx]	AL4	[CFFKC]
Calibration Factor. This function is activated if the parameters	sensor model is NOT present or	the sensors table sta	andard
(POS. 1.15) Coils EXCitation Current	[C.curr.= mA xxx.x]	AL4	[CEXCC]
Excitation coils current. This function is activated parameters.	if the sensor model is NOT prese	nt on the sensors tab	le standard
(POS. 1.16) Current Regulator PRop. Band	[C.Reg.PB=xxx]	AL4	[CRPRB]
Proportional band of coils current regulator. This for table standard parameters	unction is activated if the sensor	nodel is NOT present	on the sensors
(POS.1.17) Coils Regulator DERivative constant	[C.Reg.DK=xxx]	AL4	[CRDER]
Derivative constant of coils current regulator. This sensors table standard parameters	s function is activated if the sense	r model is NOT prese	ent on the
(POS. 1.18) Coils Current Rise TiMe	[C.R.time]	AL4	[CCRTM]
Coils current rise time.			
(POS. 1.19) Empty Pipe Detection ENable	[E.P.Detect= ON]	AL3	[EPDEN]
Enables the empty pipe detection function. This fue empty.	unction is useful to keep the mete	r lock to zero when th	ne pipe become
(POS. 1.20) Empty Pipe Detection THreshold	[Z max= Kohm xxxx]	AL4	[EPDTH]
Empty tube detection threshold value. This function	on is activated if the function is er	abled POS. 1.19 pag	. 46
(POS. 1.21) Signal Error ALarm Time	[S.err.delay=m xxx]	AL4	[SEALT]
Delay before generating error. This function is use events (empty pipe, excitation error, signal error).	eful to prevent unexpected lock to	cero of measure cau	ised by sporadic
(POS. 1.22) Automatic Sensor VeriFy Enable	[Sens. verify= OFF]	AL3	[ASVFE]
Enable the Automatic sensor verification (see BIV	optional function).		
(POS. 1.23) CoeFFicient KL	[KL=XX +/- XXXXXXXXX]	AL4	[SETKL]
Linearization coefficient for negative flow, reserve	d to the service. This command i	s only showed if SMO	DL = 000.
(POS. 1.24) SET KJ value	[Zero point cal]	AL4	[SETKJ]
Pipe hydraulic zero calibration. This function appe	ears only when the following proc	ess conditions are me	et:

□ stable flow value and less than 0.1% of the absolute scale (10 m / s)

at least 10 minutes must have elapsed after the last significant change in flow rate and allows the automatic zero calibration system to be started.

To do this, the sensor must be completely filled with liquid and perfectly still. Even imperceptible fluid movements can cause significant errors.

#### **MENU 1 - SENSOR: ONLY MCP FUNCTIONS**

	AL4	[SCTMA]
[MCP ONLY]	AL4	[SCTMB]
[MCP ONLY]	AL4	[SCRES]
[MCP ONLY]	AL4	[SE1RR]
[MCP ONLY]	AL4	[SE2RR]
[MCP ONLY]	AL4	[SCTRF]
ured on the coils of the sensor at t ature value in degrees Celsius, whi of the place of the sensor installati	he time of saving the hich owns the sensor.	
	[MCP ONLY] [MCP ONLY] [MCP ONLY] [MCP ONLY] Image: MCP ONLY]	[MCP ONLY]       AL4         Image: Alt and the sensor at the time of saving the sensor. Alt and the sensor at the time of saving the sensor. Alt and the place of the sensor installation.

Automatic Sensor VeriFy Enable	[MCP ONLY]	AL3	[ASVFE]
Enables the BIV functioning (see MCS manual)			
SET KL values	[MCP ONLY]	AL4	[SETKL]
Linearization measure coefficients			
SET TK values	[MCP ONLY]	AL4	[SETTK]
Temperature coefficients			
SET KJ values	[MCP ONLY]	AL4	[SETKJ]

Value of manual zeroing

## **MENU 2 - UNITS**

**WARNING:** The totalizer value is updated and changed depending on the setting of unit value. The scale change may cause accuracy loss depending of rounding up. For example, if T +=0,234 liters with 3 decimals, it become T +=0.001 m<sup>3</sup> losing 0.234 liters in rounding up.

(POS. 2.1) Sensor DIameter Unit of Measure	[Diam.= mm]	AL2	[SDIUM]
Sensor diameter unit of measure (mm or inch)			
(POS. 2.2) Sensor CAble length Unit of Measure	[S.Cable= m]	AL2	[SCAUM]
Sensor cable length for separate version. Select m or foot.			
(POS. 2.3) Flow Rate Unit of Measure Type	[FR. unit= METRIC]	AL2	[FRMUT]
Flow rate type measure unit. Select metric or not metric (Imperia	al units)		
(POS. 2.4) PuLse 1 Unit of measure Type	[Pls1 u.= METRIC]	AL2	[PL1UT]
Impulse unit of measure 1: metric or non-metric (English and An 48 is set to the pulse value. Furthermore the value of this functio 3.2 pag. 47	nerican units). This works i on manages the full scale v	f you function PO alues of the funct	S. 7.3 pag. ion POS.
(POS. 2.5) PuLse 2 Unit of measure Type	[Pls2 u.= METRIC]	AL2	[PL2UT]
Pulse unit of measure 2: metric or non-metric (English and Ame 48 is set to the pulse value. Furthermore the value of this function 3.4 pag. 47.	rican units). This works if y on manages the full scale v	ou function POS. alues of the funct	7.6 pag. ion POS.
(POS. 2.6) Totalizer Total Positive Unit of measure Type	[T+ unit= METRIC]	AL2	[TTPUT]
This function sets the type of unit of measurement of the totalize	er: metric or non-metric (Er	glish and America	an units).
(POS. 2.7) Totalizer Total Positive Unit of Measure	[T+unit= dm³]	AL2	[TTPUM]
This function sets the unit of measurement for the total direct to the unit of measurement of the function POS. 2.6 pag. 46.	talizer. The choice of its va	lues depends on t	the choice of
(POS. 2.8) Totalizer Total Positive Decimal Point position	[T+ D.P.= x]	AL2	[TTPDP]
Setting total direct totalizer decimal point position. Example: T+I visualized value T+dm <sup>3</sup> 0.00	D.P.= 3 visualized value T+	·dm³ 0.000 / T+D.I	P.= 2
(POS. 2.9)Totalizer Partial Positive Unit of measure Type	[P+ unit= METRIC]	AL2	[TPPUT]
This function sets the type of unit of measurement of the partial units).	totalizer: metric or non-me	tric (English and A	American
(POS. 2.10) Totalizer Partial Positive Unit of Measure	[P+ unit= dm <sup>3</sup> ]	AL2	[TPPUM]

This function sets the unit of measurement for the total total totalizer. The choice of its values depends on the choice of the unit of measurement of the function POS. 2.9 pag. 46

ISOMAG.
---------

(POS. 2.11) Totalizer Partial Positive Decimal Point position	[N.d.P+= x]	AL2	[TPPDP]

## **MENU 3 SCALE**

(POS. 3.1) Flow Rate Full Scale 1	[FS1 = 1/s xxxx.x]]	ΔΙ 4	[FRES1]
(POS. 5.1) FIOW Rate Full Scale 1		AL4	[LKL21]

The full scale is used to indicate the maximum flow rate of the meter. The scale must be chosen carefully, since its value is used for many other parameters. There are three input fields for this parameter, from left to right:

1) unit of measure 2) unit of time 3) numerical value

The selection is done by positioning the cursor over the field to be modified. To change the type of measurement (metric, British or American, mass or volume) see functions POS. 2.3 pag. 46, POS. 2.20 pag. 46.

The value of Fs1-2 also depends on the value of the nominal diameter set by the function POS. 2.10 pag. 46 .The following tables shown the units of measure available and the conversion factor by comparison with 1dm3 and 1kg. The converter accepts any kind of combination of units of measure satisfying both the following conditions:

- Numeric field value 99999
- 1/25 fsmax  $\leq$  numeric field value  $\leq$  fsmax.

Where fsmax is the maximum full scale value corresponding to the sensor, equal to a 10m/s liquid speed. The measure units are shown as appear on the display. The Imperial units units are diversified by using capital and small characters.

	METRIC		NON METRIC	MA	ASS UNIT NOT METRIC	MAS	S UNIT METRIC
cm <sup>3</sup>	Cubic centimeter	in³	Cubic inch	Oz	Ounce	g	Gram
ml	Milliliter	Gal	American gallon	Lb	Pound	Kg	Kilogram
I	Liter	GAL	Imperial gallon	Ton	Short tons	t	Ton
dm³	Cubic decimeter	ft <sup>3</sup>	Cubic foot				
dal	Decaliter	bbl	Standard barrel				
hl	Hectoliter	BBL	Oil barrel				
m³	Cubic meter	yd³	Cubic yard				
ML	Mega Liter	kgl	KAmerican Gallon				
		KGL	K British Gallon				
		IGL	Imperial Gallon				
		IKG	Imperial K Gallon				
		IGL	Acre foot				
		MGL	Mega Gallon				
		IMG	Imperial Mega Gallon				

When a measure mass unit is set, the specific gravity function is automatically enabled by the system. Please, note that the mass measure is heavily affected by the temperature. With certain liquids this may cause significant measurement errors. The following measure of time units can be selected: s = second, m = minute, h = hour, d = day.

## NOTES FOR USING THE MCP INTERFACE

The command FRFS1 =? and command FRS2 = ?, edited by MCP software, return a list of only the unit compatible with the nominal diameter set. If the sensor is insertion type and the diameter is zero, the only possible unit is m/s if the flow rate were chosen metric units, else f/s for the unit of measurement non metric.

The manufacturer guarantees only English text available on our web site www.isoil.com

(POS.3.2-3.4) OutPut 1-2 Pulse Value	[Pls1-Pls2= dm³ x.xxxxx]	AL2	[OP1PV-OP2PV]

Vps1 and Vps2 is activated when the pulse values on channel 1 and 2 are set by the following functions POS. 7.1 pag. 48; POS. 7.4 pag. 48

This function allows the user to reset the generation of a pulse when a defined amount of liquid has passed through the sensor.

To set the parameter, complete the 2 fields, from left to right: 1) unit of measurement 2) numerical value and the selection is made by positioning the cursor in the field to be modified. To change the type of unit (metric, British or American, mass or volume) see the function POS. 2.4 pag. 46; POS. 2.5 pag. 46. The value Vps1 and Vps2 depends on the nominal diameter that can be set by the function POS. 1.5 pag. 46 and the available units of measurement are those that can be set and described in the function POS. 3.1 pag. 47.

[Tpls1-2= ms x.xxxxx]	AL2	[OP1PT-OP2PT]
	[Tpls1-2= ms x.xxxxx]	[Tpls1-2= ms x.xxxxx] AL2

Output 1 and output 2 pulse duration. Tmps1 and Tmps2 is activated when the pulse values on channel 1 and 2 are set by the following functions POS. 7.1 pag. 48 and POS. 7.4 pag. 48. The user must set the corresponding duration of the pulse to be outputed. This value is expressed in milliseconds and has to be between 5 and 200 ms. When the high frequency output is present, then the minimum value can type of device is connected to the converter, the user must verify that the set pulse duration is compatible with the external device processing such pulses. If, for example, and electromechanical pulse counter is connected, a minimum pulse time of 5 milliseconds can be set.

ATTENTION: The converter can not detect problems that may occur; firstly, the pulse is too long the coils may burn out, secondly, if the pulse is too short, the counter may not be able to function, causing damage of the output.

(POS.3.3) Analog INput 1 Scale	[AIN1]	AL6	[AIN1S]
Analog input 1 sensor's scale			
(POS.3.3) Analog INput 2 Scale	[AIN2]	AL6	[AIN2S]
Analog input 2 sensor's scale .			

## **MENU 4: MEASURE**

(POS. 4.1) Measure Filter BYPass	[Filt.bypass= ON/OFF]	AL3	[MFBYP]
----------------------------------	-----------------------	-----	---------

This function modifies the standard behaviour of the filtering system. It can take the following values:

- **"OFF":** SMART adaptive filtering mode, with continuous measure evaluation analysis (default mode, standard use)
- "1": When the absolute value of the flow rate is greater than a minimum threshold (0.1 0.25% of 10 m/s f.s) the measure value is given without any filtering action. It permits to have the fastest possible response from the meter. Bypassing the filter implies that the obtained measure is more noisy than usual. This function may be useful for systems that needs to react to flow rate changes with the maximum speed and they don't care about unstable flow rate readings. Selecting an appropriate volume unit for pulses and totalizers (as big as possible) can minimize or even null the noise in long term evaluation.
- "2": The measure value is always filtered with the longest delay and strongest filtering action. It can be used when the level of native noise or instability on the measure is really high, preventing any smart filtering action. In this case the system will be really slow to react to flow step changes, but still capable of accurate readings.

ISOMAG.

(POS. 4.2) Meas. Filter CUt-off Thres.	[Cut-off=XX.X%]	AL3	[MFCUT]			
Setting the low flow cutoff threshold. This function is useful to avoid that flows close to zero, due to the electrical noises from tiny movements of liquid (due for example to vibrations of the pipe) which cause an increasing of the totalizers. The allowed range for this function is 0-25% of full scale set. For most applications a value between 0.5 and 1% is recommended.						
(POS. 4.3) Auto CAlibration Verify Enable	[Cal.verify=ON/OFF]	AL3	[ACAVE]			
This function enables an automatic verification of board's c number of tests, we recommend to use this function only in recommended to use it when the instrument is used in met	oefficients. As the converter pe presence of wide range of ten ering applications (batch).	rforms continuously a operature. Instead it is	large NOT			
(POS. 4.4) High Immunity INPuts	[H.imm.inp.]	AL4	[HIINP]			
The HIINP function (INPut High Immunity filter) introduces a hardware filter to be used ONLY IN CASE OF ABSOLUTE NECESSITY, when the measure is absolutely unstable or it is NOT possible to make the measure, and every possible attempt to reduce or eliminate the noise do not give a positive result, with particular attention of instrument ground connection. When this function is activated (HIINP = ON) the measure will be influenced by an unavoidable error estimated around 1%						
Low Power cycle SIMulation	[MCP ONLY]	AL6	[LPSIM]			
"Low power cycle simulation" can be used to make the flow on battery even when it is powered by USB or power suppl	/ meter measuring in the same y.	way it does when it is	going			
Measure Filter Cut-off Threshold 2	[MCP ONLY]	AL6	[MFCT2]			
Setting the low flow cutoff threshold, it is similar to the func- but only with MCP command.	tion in 4.2. The value of this fur	nction is NOT visible o	n diplay			
PRessure CUt-off Threshold	[MCP ONLY]	AL3	[PRCUT]

## **MENU 6 INPUTS**

(POS. 6.1-2) Volume Totalizer Total/Partial Positive reset Enab	le [T/P+/RESET=ON/0	OFF] AL3	[VTTPE][VTPPE]
Enable positive totalizer count reset. When one of these f reset through the input.	unctions is enabled (ON), t	he relative direct tot	alizer + can be
(POS. 6.3-4) Volume Totalizer Total/Partial Negative reset Ena	ble [T/P-/RESET=ON/C	OFF] AL3	[VTTNE][VTPNE]
Enable positive totalizer count reset. When one of these f reset through the input.	unctions is enabled (ON), t	he relative inverse t	otaliser - can be
(POS. 6.5) Totalizers Count Lock Input Enable	[Count lock= ON/OFF]	AL3	[TCLIE]
Totalizers counting lock command enable. When this func the system stops the totalizers no matter which is the flow	ction is active, applying a vo v rate.	oltage on the on/off i	nput terminals
(POS. 6.6) MeaSure Lock Input Enable	[Meas.lock=ON/OFF]	AL3	[MSLIE]
When this function is active (ON), applying a voltage on the will display zero flow.	he on input terminals, the n	neasurement is stop	ped, the meter
(POS. 6.7) CALibration Input Enable	[Calibration=ON/OFF]	AL3	[CALIE]
When this function is active, applying a voltage on the on cycle. <b>ATTENTION:</b> If the voltage pulse is less than 1 sec possible thermal drifts. If the voltage pulse is more 1 sec, calibration it is absolutely necessary for the sensor to be movement of the liquid may affect the result of the calibration	/off input terminals the mete c., the meter performs a cal the meter performs a zero full of liquid and that the liqu tion, and, consequently, the	er performs a autoze ibration cycle to con calibration measure uid is perfectly still. I e accuracy of the sy	ero calibration npensate e. To perform the Even very small stem.
(POS. 6.8) SYStem Violation Detect	[sys.v.detect =ON/OFF]	AL3	[SYSVD]
Enable alarm related to system violation.			
(POS. 6.9) Digital INput 2 Function	[D.In2=All./Vi.sist/OFF]	AL3	[DIN2F]
Input 2 function selection. The values that can be set are:	system violation, flooding	and OFF.	
(POS. 6.10) Digital INput 3 Function	[D.In3=All./Vi.sist/OFF]	AL3	[DIN3F]
Input 3 function selection. The values that can be set are:	system violation, flooding	and OFF	
(POS. 6.11) Digital INputs Power Supply	[D.in p.sup.=ON/OFF]	AL3	[DINPS]
Digital auxiliant input neutor averaly			

Digital auxiliary input power supply.

## MENU 7 OUTPUTS

The values to be associated with outputs 1/2/3/4 relating to functions 7.1 / 7.4 / 7.7 / 7.10 are listed below:

- OFF: DISABLE
- □ MAX AL. +: MAX DIRECT FLOW RATE OUTPUT (ENERGIZED = AL. OFF)
- □ MIN AL. +: MIN DIRECT FLOW RATE OUTPUT (ENERGIZED = AL. OFF)
- □ MAX/MIN+: MAX/MIN DIRECT FLOW RATE OUTPUT (ENERGIZED = AL. OFF)
- □ MAX AL.-: MAX INVERSE FLOW RATE OUTPUT (ENERGIZED = AL. OFF)
- □ MIN AL.-: MAX INVERSE FLOW RATE OUTPUT (ENERGIZED = AL. OFF)
- □ MAX/MIN-:MAX/MIN INVERSE FLOW RATE OUTPUT (ENERGIZED = AL. OFF)
- □ MAX/MIN+/-: MAX/MIN DIRECT FLOW RATE OUTPUT (ENERGIZED = AL. OFF)
- □ **P.EMPTY:** EMPTY PIPE ALLARM OUTPUT (ENERGIZED = AL. OFF)
- HARDW AL.SYSTEM ALARM: IT IS ACTIVATED WHEN ONE OR MORE OF THE FOLLOWING CONDITIONS OCCUR: coil excitation error, flow measurement acquisition error (critical signal or acquisition conditions), auxiliary measurement acquisition error. if they are installed (temperature, pressure, etc.)
- □ OVERFLOW: OUT OF RANGE ALLARM OUTPUT (ENERGIZED = FLOWRATE OK)
- □ ALL ALARMS: SUM OF ALL ALARMS POSSIBLE
- EXT. COMM: THE OUTPUT CAN ASSUME A STATUS DEPENDENT ON AN EXTERNAL COMMAND (via MCP, MODBUS, etc.)
- □ BATT. LOW: REPORT WHEN THE BATTERIES ARE ALMOST EMPTY
- □ FLOW RATE SIGN.: FLOW DIRECTION (ENERGIZED WHEN FLOW IS NEGATIVE)
- IAN1 MAX: MAXIMUM VALUE OF ANALOGUE INPUT 1 (function linked to the values set in the function POS. 3.6 pag. 47)
- □ IAN1 MIN: MINIMUM VALUE OF ANALOGUE INPUT 1 (function linked to the values set in the function POS. 3.6 pag. 47)
- □ IAN1 MX / MN: MAXIMUM AND MINIMUM VALUE OF ANALOGUE INPUT 1 (function linked to the values set in the function POS. 3.6 pag. 47)
- AIN2 MAX: MAXIMUM VALUE OF ANALOGUE INPUT 2 (function linked to the values set in the function POS. 3.7 pag. 47)
- AIN2 MIN: MINIMUM VALUE OF ANALOGUE INPUT 2 (function linked to the values set in the function POS. 3.7 pag. 47)
- AIN2 MX / MN: MAXIMUM AND MINIMUM VALUE OF ANALOGUE INPUT 2 (function linked to the values set in the function POS. 3.7 pag. 47 )
- DULSES.+: PULSE POSITIVE FLOW RATE
- DULSES.-: PULSE NEGATIVE FLOW RATE
- □ PULSES+/-: PULSE NEGATIVE/POSITIVE FLOW RATE

(POS. 7.1) OUTput 1 Function	[Out1= XXXXX]	AL3	[OUT1F]
Assigned function output 1. The values that can be set are description.	e described in the introduction	to the MENU 7 OUTPL	ITS
(POS. 7.2) OUtput 1 INVerted status	[Out1 inv.= OFF/ON]	AL3	[01INV]

Output 1 Inverted status

## ISOMAG.

(POS. 7.3) Output 1 PuLsed Status	[Out1 inv.= OFF/ON]	AL3	[O1PLS]
Output 1 PuLsed Status			
(POS. 7.4) OUTput 2 Function	[Out2= XXXXX]	AL3	[OUT2F]
Assigned function output 2. The values that can be set are description.	described in the introduction t	o the MENU 7 OUTPU	TS
(POS. 7.5) Output 2 INVerted status	[Out2 inv.= OFF/ON]	AL3	[O2INV]
OUtput 2 INVerted status.			
(POS. 7.6) Output 2 PuLsed Status	[Out2 pls.= OFF/ON]	AL3	[O2PLS]
Output 2 impulsive operation			
(POS. 7.7) OUTput 3 Function	[Out3= XXXXX]	AL3	[OUT3F]
Assigned function output 3. The values that can be set are description.	described in the introduction t	o the MENU 7 OUTPU	TS
(POS. 7.8) Output 3 INVerted status	[Out3 inv.= OFF/ON]	AL3	[O3INV]
OUtput 3 INVerted status.			
(POS. 7.9) OUtput 3 PuLsed Status	[Out3 pls.= OFF/ON]	AL3	[O3PLS]
Output 3 impulsive operation			
(POS. 7.10) OUTput 4 Function	[Out4= XXXXX]	AL3	[OUT4F]
Assigned function output 4. The values that can be set are description.	described in the introduction t	o the MENU 7 OUTPU	TS
(POS. 7.11) Output 4 Inverted status	[Out4 inv.= OFF/ON]	AL3	[O4INV]
OUtput 4 Inverted status.			
(POS. 7.12) Output 4 PuLsed Status	[Out4 pls.= OFF/ON]	AL3	[O4PLS]
Output 4 impulsive operation			
(POS. 7.13) Analog Out. 1 ConFig.	[Out mA1= XXXXX]	AL3	[AO1CF]
Choice of the measuring range to be associated with the c Scale zero: 4 or 0mA	urrent output 1. There are thre	e modification fields:	

□ Full scale: 20 or 22mA

□ Field: + = positive, - = negative, blank = both, -0+ = central zero scale

The values corresponding to the scale points are shown in the following chart:

CURRENT VA	LUES IN mA A	ASSOCIATE TO	O THE % FUL	L SCALE VA	LUE
POSSIBLE FIELD	REVERSE F	LOW VALUE	ZERO	DIREC	CT FLOW VALUE
	≤-110%	-100%	0%	+100%	≥+110%
Out.mA = 4 ÷ 20 +	4	4	4	20	20
Out.mA = 4 ÷ 20 -	20	20	4	4	4
Out.mA = 4 ÷ 20 +/-	20	20	4	20	20
*Out.mA = 4 ÷ 20 –0+	4	4	12	20	20

(POS. 7.14) Analog Output 1 Full Scale	[A1S= xx/x x.xxxx]	AL3	[A01FS]
It allows to set the full scale value for analog output 1 inde	pendently from the main scale	e of the instrument.	

## **MENU 8 COMUNICAZIONE**

(POS. 8.1) DeVice ADDress	[Dev. Addr]	AL3	[DVADD]
Device Address.			
(POS. 8.2) MoDBuS SPeed	[Speed]	AL3	[MDBSP]
Modbus Speed. Speed range setting: 4800(bps) / 9600(bps) /	19200(bps) / 22800(bps) /	38400(bps)/ 57600(bp	os).
(POS. 8.3) MoDBus PArity	[Parity]	AL3	[MDBPA]
Modbus Parity.			
(POS. 8.4) MoDBus DeLay	[Delay]	AL3	[MDBDL]

[C.timeout]

AL3

[MDBCT]

Modbus delay.

(POS. 8.5) MoDBus Chars Timeout

**MODBUS Chars Timeout** 

For ModBus functions see the dedicated manual

## **MENU 9 DISPLAY**

(POS. 9.1) Layout LANGuage	[Language]	AL1	[LLANG]
Choice of the language. There are 8 languages available: GB = German, FR = French, PT = Portuguese, ES = Spanish.	= English, IT = Italian, TR	= Turkish, PL = Polish,	DE =
(POS. 9.2) KeyBoard TiMeout Time	[Disp.time]	AL1	[KBTMT]
Waiting time before the display turns off after the last use of the	e keyboard. The set value	s are from 5 to 255 sec	onds.
(POS. 9.3) DISplay Function Number	[Disp.fn.]	AL2	[DISFN]
This function sets the display of the page making it visible whe associated with a number that corresponds to the position.	n you start the display. Fo	r each display page is	
(POS. 9.4) Display function LOcK Enable	[Disp.lock]	AL2	[DLOKE]
This function blocks the scrolling of the pages displayed and se	elected by the function PC	)S. 9.3 pag. 49.	
(POS. 9.5) Partial TOTalizers Enable	[Part.tot.]	AL2	[PTOTE]
This function enables the display of partial totalizer in visualiza	tion pages.		
(POS. 9.6) NEGative value Totalizers Enable	[Neg.tot.]	AL2	[NEGTE]
This function enables the display of negative totalizer in visuali	zation pages.		
(POS. 9.7) Net Value ToTalizers Enable	[Net tot.]	AL2	[NVTTE]
This function enables the display of net totalizer in visualization	n pages.		
(POS. 9.8) Date And Time Display Enable	[Disp.date]	AL2	[DATDE]
This function enables the display of date and time in visualizati	on pages.		
(POS. 9.9) Quick STart Menu Enable	[Quick start]	AL2	[QSTME]
This function enables the quick start menu.			

## **MENU 10 DATA LOGGER**

(POS. 10.1) Data LOGger Enable	[D.logger en.=ON/OFF]	AL3	[DLOGE]	
This function enables data loger.				
The following functions ar	e activated by [D.logger en= 0	ON]		
(POS. 10.2) Data Logger Units of Measure Enable	[Meas.units= ON]		AL3	[DLUME]

Enables the registration of the units of measurement set in the dev	vice.		
(POS. 10.3) Data Logger Field Separator Character	[Field separ.= , ;]	AL3	[DLFSC]
This function sets the separation character between the recorded	data.		
(POS. 10.4) Data Logger Decimal Separator Character	[Decim.separ.= .]	AL3	[DLDSC]
This function sets the separator character between the value of the	e num. value of the recorded	data.	
(POS. 10.5) Data LoGger Sample Interval	[Interv.= xx:xx:xx]	AL3	[DLGSI]
This function sets the data logging frequency. [interval = Hours: Mi	nutes: seconds]		
(POS. 10.6) Data logger Totalizer Total Positive Enable	[Log T+= ON]	AL3	[DTTPE]
Enables recording of total positive totalizer values.			
(POS. 10.7) Data logger Totalizer Partial Positive Enable	[Log P+= ON]	AL3	[DTPPE]
Enables recording of positive partial totalizer values.			
(POS. 10.8) Data logger Totalizer Total Negative Enable	[Log T-= ON]	AL3	[DTTNE]
Enables recording of total negative totalizer values.			
(POS. 10.9) Data logger Totalizer Partial Negative Enable	[Log P-= ON]	AL3	[DTPNE]
Enables recording of negative partial totalizer values.			
(POS. 10.10) Data Logger totalizer Partial Net Enable	[Log TN= ON]	AL3	[DLTNE]
Enables recording of total totalizer net values.			
(POS. 10.11) Data Logger totalizer Partial Net Enable	[Log PN= ON]	AL3	[DLPNE]
Enables the recording of the net partial totalizer values.			
(POS. 10.12) Data logger Flow rate in Technical Units Enable	[Log Q(UM)= ON]	AL3	[DFTUE]
Ability to record the flow rate in a set unit of measurement.			
(POS. 10.13) Data logger Flow rate in PerCentage Enable	[Log Q(%)= ON]	AL3	[DFPCE]
Ability to record the flow rate as a percentage of the set full scale v	value		
(POS. 10.14) Data logger ALarm Events Enable	[Log AL.EV= ON]	AL3	[DALEE]
Enables recording of events and alarms.			
(POS. 10.15) Data logger ADditional Measures Enable	[Log ADM= ON]	AL6	[DADME]

It allows to log the additional analog measurements, as for example pressure and temperature. This option is valid only with analog inputs enabled and the module installed.

# ISOMAG.

(POS. 10.16) Data logger Sensor Test Results Enable	[Log STR= ON]	AL6	[DSTRE]
Enable logging of sensor test results.			
(POS. 10.17) Data logger Board TemperatureS Enable	[Log BTS= ON]	AL6	[DBTSE]
Enable logging of board temperature.			
(POS. 10.18) Data logger Internal Board Voltages	[Log IBV= ON]	AL6	[DIBVE]
Enable logging of internal board voltage.			
(POS. 10.19) Data logger Electrodes DC Voltages Enable	[Log EDC= ON]	AL6	[DEDVE]
Enable logging of electrodes DC voltage.			
(POS. 10.20) Data logger Electrodes AC voltages Enable	[Log AEC= ON]	AL6	[DEAVE]
Enable logging of electrodes AC voltage.			
(POS. 10.21) Data logger Electrodes Source Impedance Enable	[Log EIZ= ON]	AL6	[DESIE]
Enable logging of electrodes impedance.			
(POS. 10.22) Data logger Sensor Coils Values Enable	[Log SCV= ON]	AL6	[DSCVE]
Enable logging of sensor coils value.			
MENU IU - DATA LUGGER, UNLT MCP FUNCTIONS			

# LoG All Information Enable[MCP ONLY]AL6[LGAIE]Enable logging of all instrument events. This function enables the recording of all data for which registration is required.Activation this function and the supervised by the

Activating this function, the system records in detail each operation with the consequence that the file produced by the logger will be large and will incisively reduce the space in the SD memory. It is advisable to activate this function only if necessary (for example to identify communication problems with SMTP or FTP servers).

Sensor Test data FieLds Format	[MCP ONLY]	ALO	[DLFLF]
Data logger fields format			
Sensor Test data FieLds Format	[MCP ONLY]	ALO	[STFLF]
Format sensor test data fields			
Data Logger Instantaneous Process Data	[MCP ONLY]	ALO	[DLIPD]
Read instantaneous values of process data.			

## USING DATA LOGGER BY MCP INTERFACE

The data collected by the data logger are stored on a micro SD card. Their organization is based on a tree structure and the system saves day by day, in two separate files, events and data loggers. Data can be downloaded via the MCP interface, as shown in the following examples. **Note:** The number of processed data depends on the sampling interval set and the number of variables enabled for registration.

## MCP INTERFACE

Select the "data logger" tab as shown below to access the file download interface.

	В	С	E	F
File Config. Datalogger Log	g USB Diagnostic			
Download settings: Data source:	Quando:	Oggi:	Download	Stop
<ul> <li>Datalogger</li> <li>Verifica Sensore</li> </ul>	O Range data	Tutto		<b>X</b>
O File generico	Path save:		Select         RLLDT : 1,223:FT DOWN	LOAD READY [120927]
			* 1,226.F1 CONFLETED [D0	MMCOMD[[120327][31 III3]

#### A=Data source

- Events: Download system events (Sample Line 2016/09 / 14-01: 00: 00.000 -W0216- [1] ALARMS still active)
- Data logger: Download and save the recorded data through the data logger function.
- Sensor Verify: Download sensor verification data (if BIV is active).
- Generic file: Download a specific file contained in the SD card.

#### B=When

Indicates the reference period to download the data.

- □ Today: current day file download
- Data range: selection of the download period.

#### C=Today

(divides today's day into different download frames)

- Last: download only the latest data collected AFTER the last data download
- All: download the data of the whole current day of the file

#### **D=Save path:**

This option allows you to save the files in the desired folder on your PC

#### E=Download:

Button to start the download process

#### F=Stop:

Button to stop the download process

## **Example: Download Events**

To download all the events of the current day in a specific folder, set the below parameters as follows: The parameters are set then click the Download button.

Once the download is completed, a window containing the list of today's events appears. The file is saved in the specified folder in .txt format .

V.0.00.1756.FFFF Jun 6 2016 14:16:55 SN:99

#### Example: Download Data Logger

**Note:** it is recommended the date synchronization between converter and PC to perform correctly the events and logger reading operations.

BO	V. CPu 0 0 0	- Volt CPU power supply
BN	<u>کے ح</u>	Unit of measure (Volt)

#### **Example: Sensor Verify**

To make the control measures of the state of the sensor and the related automatic verification files is necessary that the BIV function (Built-In-Verificator) is turned on (optional). If the BIV is enabled, the instrument automatically tests the sensor operating parameters every hour and records the data on the "STESTLOG.CSV" file; it is possible to do a manual check using the "sens.verify" command on the "Diagnostic" menu or through the MCP "SVERC" command

### **MENU 11 - FUNCTION**

The following functions are activated by first pressing the "ENTER" and then the "ESC" when the screen appears "confirm" to start the function.

(POS. 11.1) Volume Totalizer Total Positive Reset	[T+ RESET]	AL3	[VTTPR]			
Reset total direct totalizer for direct flow rate						
(POS. 11.2) Volume Totalizer Partial Positive Reset	[P+ RESET]	AL3	[VTPPR]			
Reset total partial totalizer for direct flow rate						
(POS. 11.3) Volume Totalizer Total Negative Reset	[T- RESET]	AL3	[VTTNR]			
Reset total reverse totalizer for direct flow rate.						
(POS. 11.4) Volume Totalizer Partial Negative Reset	[P- RESET]	AL3	[VTPNR]			
Reset partial reverse totalizer for direct flow rate						
(POS. 11.5) Load Factory Default Sensor Data	[Load sens.f.def]	AL3	[LFDSD]			
This function loads the factory data of the sensor. To save the	e factory data see function	(11.7).				
(POS. 11.6) Load Factory Default Converter Data	[Load conv.f.def]	AL3	[LFDCD]			
This function loads the factory data of the converter. To save	the data, see function (11.	8).				
(POS. 11.7) Save Factory Default Sensor Data	[Save sens.f.def]	AL6	[SFDSD]			
This function saves the factory data of the sensor.						
(POS. 11.8) Save sensor factory default	[Save conv.f.def]	AL6	[SFDCD]			
This function saves the factory data of the converter.						
(POS. 11.9) Save Factory Default Converter Data	[Calibration]	AL5	[CALIC]			
Activation of the function adjusts the board calibration parameters. Pressing the ENTER key briefly while the function is displayed will display the message: "Execute?" Press and hold the Enter key to proceed. Press any other key to cancel the operation. NOTE: If a valid sensor data table is present, the calibration starts automatically even when one of the following parameters is modified:						
SENSOR DIAMETER -> Menu Sensor1 / SENSOR MODEL	-> Menu Sensor1					
S. FREQ> Menu Sensor1 / EXC CURRENT -> Menu Sens	or1					
IO CHECK the calibration status, active or inactive, enter the co calibration in progress / CALIC = 0 calibration completed	ommand MCP "CALIC?" A	nd check as follow	s: Calic = 1			

### **MENU 11 - FUNCTION: ONLY MCP FUNCTIONS**

Sensor ReFerence Data Save	[MCP ONLY]	AL4	[SRFDS]

Save conv.f.def= ON, saving sensor reference data.

Used for the function POS. This function allows the import of data from one converter to another up to level 4 included. The hardware configurations and the corresponding calibration values are not restored. The "data import" procedure can be performed one time only, since the directory, according to the board's SERIAL NUMBER, will be renamed. pag. 93.

Input ReFerence Data Save	[MCP ONLY]	AL4	[IRFDS]

Save el.input reference data

### **MENU 12 - DIAGNOSTIC**

(POS. 12.1) AutoTeSt Immediate Command	[Self test]	AL3	[ATSIC]					
Self-test function. This function stops the normal functions of the counter and performs a complete test cycle on the input, measurement and excitation circuits. To Activate this function, after having selected it, press the "enter" button and the question "Confirm?" Press "ESC" to automatically start the test or any other button to cancel the operation. At the end of the operation the converter restarts and restores the screen to the initial display page. This function is performed automatically when the device is turned on.								
(POS. 12.2) Test display	[Test display]	AL1 N	O MCP COMMAND					
This function allows you to test the graphic display of the converter. During the execution of this function, 4 screens are displayed in sequence to test the correct operation of the device.								
(POS. 12.3) Sensor VERify Command	[Sens. verify ]	AL3	[SVERC]					
Diagnostic function and sensor verification, allows to do a sen	nsor test (if BIV enable	ed).						
(POS. 12.4) Measure SIMulation ENable	[Flow sim=ON]	AL3	[MSIEN]					
Enabling the flow simulation function. By activating this function it is possible to simulate a flow. With this system it is possible to test the outputs of the meter and the instruments connected to it. After enabling the flow rate, this symbol appears on the display $\mathbf{AV}$ , and the simulation can be:								
J Set: pressing the "Enter" key from one of the display pages, to set the% flow rate value, and pressing "Enter" again $_{-2}$								

to confirm the value. □ Ended: by pressing the "Esc" key on the page where the simulated value is set.

-	Ended. by pressing the	L30 K	cy on the page w		

(POS. 12.5) Diagnostic Measure VaLueS	[Display measures]	AL5	[DMVLS]
This function shows the values of various internal parameter	rs (diagnostic purpose reserv	ved for the service	<i>_</i> )

function shows the values of various internal parameters (diagnostic purpose reserved for the service).

AL5

#### (POS. 12.6) Diagnostic Communication VaLueS

[ Disp. comm. vars ]

```
[DCVLS]
```

This function shows the values of various internal specific communication parameters (diagnostic purpose reserved for the service).

The following are the statuses for the PPP and MCPI link for the device connection.

- Status of the PPP link:
- □ "UNDT" = undetermined.
- □ "DEAD" = PPP link not active.
- □ "LCP" = phase of LCP, transition phase.
- □ "AUTH" = transition phase.
- □ "IPCP" = IP address assignment.
- "NETW"= established network (normal persistent condition when the connection is active).
- "TERM" = termination request, transition phase.

MCPI link status:

- CLOSED" = closed socket
- □ "ACCEPT" = Waiting for new connection
- "ESTABLISH" = established link
- □ "CLS\_WAIT" = waiting for closure
- □ "LAST\_ACK" = LASK ACK sent
- □ "FIN\_WAIT" = (See the RFC TCP / IP documentation)
- □ "TIME\_WAIT" = (See the RFC TCP / IP documentation)

(POS. 12.7) OscilloSCOPe function	[Display graphs]	AL5	[OSCOP]

This function displays the input graphs. The MCP command allows you to see the data on the graph in numeric format, as a list of values. Typing OSCOP = 1 allows you to view the numeric values of the graph in position 1. The measurement charts provided are 8.

- □ Z=impedance
- C. current=Coils current
- C. volt=Coils voltage
- C.load: Coils load
- □ Input 1= E1
- □ Input 2=E2
- □ SIGNAL=analog to digital converter.
- Input 1-Input 2

[SDSTA]

#### (POS. 12.8) SD memory STAtus

[SD card info]

AL0

This function indicates the status of the SD card as shown in the following figure.

The statistical calculation is performed whenever the SDSTA command is invoked or when accessed from the display. The statistical data is updated AUTOMATICALLY every day (24 hours) or manually each time the function is called up on the display or the SDSTA command is sent. However, since a minimum time of one hour is required for detection, the data will not be recalculated before this time interval.

Minimum time of 1 hour for the new data update

The SD card must be replaced only by the service. The use of commercial cards could disable some functionality of the instrument.

(POS. 12.9) MODel and Software Version	[Firmware info	) ALC	[MODSV]		
Version / revision firmware information. MV255 V . 0.000.FFFF MMM 00000 00:00:00					
(POS. 12.10) SeRial NUMber	[S/N=XXXXXX]	AL0	[SRNUM]		
Displays the serial number of the instrument board. (	(read only)				
(POS. 12.11) Total WorKing TiMe	[WT= xxxx: xx: xx: xx]	AL0	[TWKTM]		
View Total working time instrument. (read only)

Sensor table version			
(POS. 15.34) SEQuence NumBer	[MCP ONLY]	AL0	[SEQNB]

Sequence number. The SEQNB command allows you to specify a sequence number to be used when querying the meter (additional verification procedure). The same number that is set with SEQNB = number is retransmitted as a response by the converter. This function, together with the process commands used to read the variables (capacity, volumes, etc.) allows to keep synchronized the received values with the requests made. In this way it is possible to verify the temporal sequence with which the messages are received by the meter. Example:

Request: SEQNB=1;FRVPC? Request: 1;%,12.345678 Request: SEQNB=2;FRVPC? Request: 2;%,11.456778 Request: SEQNB=3;FRVPC? Request: 3;%,10.983228 Request: SEQNB=4;FRVPC?

. <= Sequence 4 is missing, error

### Request: SEQNB=5;FRVPC?

Return: 5;%,10.992783

The example shows how SEQNB can help identify exactly what message was lost. In this case the requests are all the same (apart from the SEQNB number), but with different requests, SEQNB can be a verification tool.

### METER DATA

This function allows the import of data from one converter to another up to level 4 included. The hardware configurations and the corresponding calibration values are not restored. The "data import" procedure can be performed one time only, since the directory, according to the board's SERIAL NUMBER, will be renamed.

### **OPERATING PROCEDURE TO CHANGE THE CONVERTER BOARD**

Remove the 4 screws (see POS. power supply converter pag. 19) to be able to remove the battery case. Attention to the internal wiring of the instrument.

REMOVE THE 4 SCREWS OF FIXING OF HOUSING COVER BATTERY HOLDER

WARNING ! OPEN THE BATTERY PACK DELICATELY NOT FOR DAMAGE THE SHOCK ELECTRICAL BATTERIES

GENTLY DISCONNECT THE CABLES OF THE BATTERY PACK

Remove the 2 screws to be able to remove the battery case cover. Attention to the internal wiring of the instrument

REMOVE THE 2 SCREWS OF FIXING OF HOUSING COVER BATTERY HOLDER

Remove the 4 screws (see POS. MV145 CONSTRUCTION pag. 16) to remove the MV145 card. Attention to the board wiring.

Remove the 4 screws (see POS. MV145 CONSTRUCTION pag. 16) to remove the MV145 card. Attention to the board wiring. Remove the SD card and insert it into the new card.

Once the card is assembled to the converter, perform the following procedures:

- Connect the internal wiring to the board without directly connecting the batteries (see diagrams POS. power supply converter pag. 19 ).
- □ Assemble the MV housing cover
- Assemble the battery case cover
- Connect the batteries of the housing to the cable / wiring to the board.
- □ Assemble the battery case with the 4 screws removed
- Correctly assembled the converter start the function (POS. 11.8 pag. 49) to restore data.

# **B.I.V. (BUILT-IN VERIFICATOR)**

BIV, abbreviation for Built In Verificator, is available as option for MV145 converters and must be enabled by the manufacturer. It is also necessary that the SD card is activated to store saved data. The analysis of collected data performed by a dedicated IsoBIV software running on another device (PC).

The simplicity of test procedures minimize the risk of handling errors; maximum safety and reliability thanks to the traceable factory calibration and internal references complement the safety by design principle with minimal failure rates IsoBIV allows to create and print a report as validation of device functionality/measure error.

### Operation and Conditions of Use.

The system is based on periodic measurements performed every hour or using a manual command (MCP command = SVERC). The sensor parameters are measured and compared with previously measured and stored reference values. Each time the system performs a series of measurements on the sensor and records them in a file called "STESTLOG. CSV", which resides in the main directory of the SD memory of the converter.

The sensor test can also be carried out without the active BIV system, but in this case only the presence of isolation losses and the overall good functioning of the sensor such the coil resistance, the excitation current and the rising times of the current within the generic limits that guarantee operation. Instead if BIV is active, the measurements are deeper and the measured values are tested by comparing them with a set of characteristic sensor parameters measured at the time of installation.

### Saving Reference Values (Characteristic Parameters)

After sensor installation, the parameters that will be used as reference for the BIV system and the MCS data analysis software must to be measured.

The characteristic values of the coil circuits are saved in the converter memory at the factory before to ship the instrument. For the reference measure of the electrodes circuits, there is a specific function that perform the measures of voltage and resistance at the installation site. This function is managed ONLY by the MCS program, which through a simple wizard will set the converter to perform the measures in the specific measurement point where the meter is installed.

To activate BIV, these functions must be verified:

- □ BIV option enabled at the factory
- [ASVFE=1] : It enable the sensor's automatic test every hour. The ASVFE function in Menu 1 with access level 3 can be also activated using the instrument's display.

This feature can be enabled even if the SD card is not installed and if the BIV function is not active; in such a case the sensor file is NOT created and any alarms will be generated either if the data deviation from the reference data is outside the sesnor's limits. Practically, in the absence of the necessary hardware permissions, this function is useful to test the insulation of the coils.

#### Opening and reading manually the files STESTLOG.CSV

The list below describes the steps for saving and reading STESTLOG.CSV file.

- □ Start the MPC program *i* for opening the converter menu interface.
- □ Follow these steps:

□ Reading and meaning of the STESTLOG.CSV file

(#): the units of measurement are recorded only if the specific function of the DATA LOGGER is active. Otherwise the field is empty.

(\*): the temperature values can be expressed in degrees F or C, depending on the configuration of the converter.

$\geq$		The unit of voltage (mV) (#)
>	+0.000 +0.000 +0.000 +0.000 +0.000 +0.000 +0.000	Differential mode noise at low frequency

#### Standard and internal check to the instrument limits

The measured data are compared with the reference values previously stored. The variation of different variable measured, shall be within the following range:

Coil temperature (using resistance reading): within limits compatible with the lining material

□ Current up times: change% detected resistance coils + 10% (tolerance range)

□ Resistance between electrodes and common: between 0.3 and 3.0 times the reference early strength

Leakage current (insulation test): less than 0.1 mA

If the values deviate beyond these limits it is generated and displayed a coded alarm. The alarm remains active and visible on the display until next test (max. 1 hour).

### SOFTWARE MCS

The MCS software allows analysis and processing of STESTLOG.CSV file data. For further information, refer to the manual of MCS software.

# ALARM MESSAGES (CAUSES AND ACTIONS TO BE TAKEN)

MESSAGE	CAUSES	ACTION TO TAKE	
No alarm	The system works properly		
[000] SYSTEM RESTART			
[001] Errore F-RAM	Error writing to F-RAM	Restart the system. If the error persists, contact the service	
[002] SD card error	SD card not found or unreadable	Check and / or replace the SD card. If the error persists, contact the service	
[003] SD-card memory almost exhausted	SD card memory running out.	Plan to replace the SD card as soon as possible.	
[004] Out of memory SD- card	Out of memory SD-card.	Replace the SD card	
[005] Primary power absent	Evaluate if this condition is normal or unexpected. This alarm condition is configurable user.	Check system settings	
[006] Err. Comm. CPU	Communication error between CPU.	Restart the system. If the error persists, contact the service.	
[007] Low B3 Battery Level	B3 battery below the charge limits.	Replace the battery 3 Or if the battery is rechargeable allow recharging	
	Evaluate whether the repeat was	See the Power supply section of this manual	
[016] System restarted	Otherwise consult the event logger to determine the causes.	Check the event logger to determine the causes and the corresponding remedies.	
[017] Invalid time / date	Incorrect adjustment of the date and time from the set reference system.	Set the time and date.	
[018] CPU frequency error		Contact the service	
[019] Internal voltage error		Contact the service	
[020] Battery B1 discharged	Battery B1 discharged	Replace the battery 1	
[021] Battery B2 discharge	Battery B2 discharge	Replace the battery 2	
[022] Excitation error	Sensor not correctly connected, wiring interrupted, faulty connections or incorrect sensor control parameters.	Check the wiring and the sensor parameters. If it is not enough, contact the service.	
[023] Signal error	Critical measurement conditions, lack of valid earth connection, presence of persistent electrical disturbances or wiring / connections with the sensor incorrect or interrupted.	Check the wiring with the sensor. If it is not enough, contact the service.	
[024] Empty pipe	The measuring tube is empty or the detection system has not been correctly calibrated.	Check the presence of liquid in the connected pipe, check the correct setting of the maximum allowable resistance on the electrodes.	
[025] FLOW RATE>MAX+	Alarm Maximum flow rate + The flow rate is higher than the maximum positive threshold set in the instrument.	Check the value of the set flow rate threshold and the process conditions.	

ISOMAG.

	Alarm Maximum flow rate -	
[026] FLOW RATE>MAX-	The flow rate is higher than the maximum negative threshold set in the instrument.	Check the value of the set flow rate threshold and the process conditions.
	Alarm Minimum flow rate +	
[027] FLOW RATE <min+< td=""><td>The flow rate is higher than the minimum positive threshold set in the instrument</td><td>Check the value from the set flow rate threshold and the process conditions.</td></min+<>	The flow rate is higher than the minimum positive threshold set in the instrument	Check the value from the set flow rate threshold and the process conditions.
	Alarm Minimum flow rate -	
[028] FLOW RATE <min-< td=""><td>The flow rate is higher than the maximum negative threshold set in the instrument</td><td>Check the value from the set flow rate threshold and the process conditions.</td></min-<>	The flow rate is higher than the maximum negative threshold set in the instrument	Check the value from the set flow rate threshold and the process conditions.
[029] FLOW RATE>F. SCALE+	The flow rate is higher than the positive full scale value set in the instrument	Check the value from the set flow rate threshold and the process conditions.
[030] FLOW RATE>F. SCALE-	The flow rate is higher than the positive full scale value set in the instrument	Check the value from the set flow rate threshold and the process conditions
[031] PULSES1>MAX	The pulse generation output 1 of the device is saturated and a sufficient number of pulses cannot be generated	Set a larger unit if the device allows it and / or reduce the pulse value.
[032] PULSES2>MAX	The pulse generation output 2 of the device is saturated and a sufficient number of pulses cannot be generated.	Set a larger unit if the device allows it and / or reduce the pulse value
[033] Calibration error.	Calibration error.	Make sure that the sensor is connected correctly and that the type of sensor corresponds to the one set. If the error persists, contact the service.
[034] General sensor error	General sensor error	The sensor test gave a negative result. Examine the code reported in the event logger or on the diagnostic values page to determine the possible causes. WARNING: the error condition remains until the next test is performed or until the instrument is restarted.
[35] Access configuration failed	Access to the configuration parameters was attempted with an incorrect password.	The alarm condition is user configurable. Check the configurations performed.
[36] Access configuration detected	Access to configuration parameters has been detected. This could be a legitimate or unexpected operation.	The alarm condition is user configurable. Check the configurations performed.
[37] System violation	A violation of system integrity has been detected. This alarm is detected by a switch connected to a digital input of the instrument specifically configured for this use.	The alarm condition is user configurable. Check the configurations performed.
[38] Flooding	A flooding condition of the system has been detected. This alarm is detected by a switch connected to a digital input of the instrument specifically configured for this use.	The alarm condition is user configurable. Check the configurations performed.
[39] Analog input error 1	The signal or the sensor connected to the optional analogue input 1 are incorrect or not correctly configured.	Check the relative wiring and that the type of sensor is correct / working.

[40] Analog input 1 out of scale	The signal deriving from the sensor connected to the optional analogue input 1 is too large for the configured measurement scale.	Review the configuration parameters and check that the sensor has been connected correctly.
[41] Measurement analog input 1 higher threshold MAX	Measurement analog input 1 higher threshold MAX	Check the process conditions and the threshold set as the maximum signal alarm for the optional analog input 1.
[42] Measurement analog input 1 lower threshold MIN	Measurement analog input 1 lower threshold MIN	Check the process conditions and the threshold set as the minimum signal alarm for the optional analogue input 1.
[43] Input error analogue 2.	The signal or sensor connected to the optional analogue input 2 is incorrect or not configured correctly.	Check the relative wiring and that the type of sensor is correct / working.
[44] Analog input 2 out of scale.	The signal deriving from the sensor connected to the optional analogue input 2 is too large for the configured measurement scale.	Review the configuration parameters and check that the sensor has been connected correctly.
[45] Analog input 2 measurement higher threshold MAX	Analog input 2 measurement higher threshold MAX.	Check the process conditions and the threshold set as the maximum signal alarm for the optional analog input 2.
[46] Analog input 2 measurement lower threshold MIN	Analog input 2 measurement lower threshold MIN	Check the process conditions and the threshold set as the minimum signal alarm for the optional analog input 2.
[47] System protection error	The system has detected a protection error related to the MID parameters.	Contact the service
[55] Configuration login failed	An attempt was made to access the configuration parameters with an incorrect password	The alarm condition can be configured by the user. Check the configurations made.
[56] Configuration access detected	Access to configuration parameters was detected. This could be a legitimate or unexpected operation.	The alarm condition can be configured by the user. Check the configurations made.

### ERROR CODE TEST SYSTEM OF SENSOR

The codes are in hexadecimal format, the meaning is given for each bit. There are several possible error simultaneous combinations (more bits active) then that will give the combined numerical codes.

CODE	ANOMALIES DESCRIPTION	ACTION TO TAKE
0000	NO ERROR	
0001	SENSOR TEST INSULATION: Generator power too low.	
0002	SENSOR TEST INSULATION: Generator power too high.	
0004	SENSOR TEST INSULATION: Phase 1 generator voltage too low.	
0008	SENSOR TEST INSULATION: Phase 1 generator voltage too high.	
0010	SENSOR TEST INSULATION: Phase 1 terminal voltage coils 1 too low.	
0020	SENSOR TEST INSULATION: Phase 1 terminal voltage coils 2 too low.	Contact the service
0040	SENSOR TEST INSULATION: Phase 2 generator voltage too low.	
0080	SENSOR TEST INSULATION: Phase 2 generator voltage too high.	
0100	SENSOR TEST INSULATION: Phase 2 terminal voltage coils 1 too low.	
0200	SENSOR TEST INSULATION: Phase 2 terminal voltage coils 2 too low.	
0400	SENSOR TEST INSULATION: Insulation loss, leakage current out of tolerance.	
0800	TEST TEMPERATURE (RESISTANCE) COILS: Temperature (resistance) out of tolerance.	
1000	TEST TIME GETTING ON CURRENT PHASE (A): Value out of tolerance.	To verify: - wiring between converter sensor,
2000	TEST TIME GETTING ON CURRENT PHASE (B): Value out of tolerance.	- set parameters. If the problem persists, contact the service
4000	TEST RESISTANCE INPUTS ELECTRODES: Input value 1 out of tolerance.	
8000	TEST RESISTANCE INPUTS ELECTRODES: Input value 1 out of tolerance	
10000	Excitation error during the test	The sensor test failed because an excitation error was present. Check the sensor wiring and the parameters set, in particular check that the type of sensor is set correctly.
20000	Invalid reference values	The reference values used to check the measurements detected on the sensor are not valid. Perform the procedure for storing reference values correctly.
40000	Empty tube	The tube is empty and therefore it is not possible to check the values measured on the electrodes. Check the installation conditions and the parameters related to the recognition of the empty pipe condition (maximum resistance threshold on the electrodes).

At the end of its lifetime, this product shall be disposed of in full compliance with the environmental regulations of the state in which it is located.

### MANUAL REVIEWS

REVIEW	DATE	DESCRIPTION
145_EN_IT_R0_1.00.0	10/05/2019	First edition
145_EN_IT_R1_1.00.0	04/06/2019	Aggiunte informazioni sulle condizioni di consegna convertitore
145 EN_IT_R2_1.00.0	11/09/2019	Added wiring diagram for RS485
